application. AutoCAD supports two different graphics interfaces: the original Windows GDI (Graphics Device Interface), which was designed in the early 1990s, and the newer OpenGL. In addition to the basic functionality, AutoCAD LT and AutoCAD Architecture have more advanced functions. AutoCAD allows users to work on a common design file simultaneously and to update it together. Through the Internet, file access can be synchronized. File transfer or the distribution of 3D parts is often also supported. Terminology An AutoLISP program is a program that is written using the AutoLISP programming language. The AutoLISP compiler that is part of the AutoCAD system is used to convert AutoLISP programs into a form that is executable by the AutoCAD system. This method of programming is different from traditional coding in that the process of writing the program, compiling it, and converting it into a form that can be used by AutoCAD is achieved within the AutoCAD program itself. While this can cause a problem when errors occur during the compiling process, the AutoLISP system is documented, and it is common for programming errors to be found and corrected through use of the documentation. A common technique is to test the program by compiling it into a form that can run ca3bfb1094
