AutoCAD Architecture AutoCAD is a single application composed of two primary applications: AutoCAD and AutoCAD LT. AutoCAD is a centralized, client-server desktop computer-aided design application, and AutoCAD LT is a desktop version of AutoCAD that runs in an architecture similar to Windows and macOS. AutoCAD and AutoCAD LT are both set up to run at the same time, which means that the user can freely switch back and forth between the two applications without having to log off and start again. You can even open different parts of the same drawing in either application, allowing you to work on the same drawing at the same time. AutoCAD provides features for both beginners and professionals. The included tutorials and training videos are simple, easy to follow, and include video-based training. These videos are also available online at autodesktraining.autodesk.com.
