cofaso eschematic is the first product based on the true engineering and design process. each time that the engineers add a new eschematic component to a project, it can be reused in other projects.

purchasing the product is not mandatory. the product can be downloaded free of charge from the athapack website:

[www.athapack.be](http://www.athapack.be). cofaso eschematic is the result of a year of research and

development. it is based on the most advanced technology available today. the product is now available for purchase in

europa. you can buy it at the athapack website: [www.athapack.be](http://www.athapack.be). overview of

## Cofaso Full 195

cofaso eschematic provides the eschematics library, which contains more than 1,000,000 components. every part has various attributes such as its parts list, markings, contact type, number of pins and part number. when you are designing a complete circuit using cofaso eschematic, the part name and values are automatically selected by the automatic part selection feature. the part library can be searched, and the results of the search are displayed in a list. you can change the name and markings of the components by just pressing the corresponding keys on the keyboard. moreover, you can add your own part numbers, attributes and contact types by the edit menu. cofaso eschematic provides an option to draw the circuit by drag & drop. you can also draw the circuit by connecting the parts by the wire tool. you can also set the order of the parts by

inserting the parts in the sequence. in addition, you can also select the part based on its attributes (such as the markings, contact type and so on). all the main engineering departments and services are using the cofaso eschematic. they are able to define their own design process using cofaso eschematic. the engineers are free to import their own design files and cofaso eschematic is able to create a library from them. later on, the engineers are able to complete the design as usual with cofaso eschematic. this allows engineers to focus on the design process, in contrast to traditional cad tools, where the engineer has to do the design and not the engineering. 5ec8ef588b
