

ok guys i am having a problem with my ps3 i am really annoyed so i was hoping i could get some help from you guys about this problem. i got my download complete then my ps3 crashed. i am on the xmb i got install but when i do i get a error message. the error message is this "access to the system is denied" what can i do? i bought this game a few weeks ago and it was great until on the 20th february (when it should have came out) the game started crashing after i installed the updates. then my ps3 wouldn't start up again. this happened twice and was driving me mad so i turned it off then turned it back on and it was working again but it wouldnt save my game when i start it. then i realised that i had to download the updates again so i did and it started crashing again. this happens three times and now i cant even play online. i cant believe that ea would do this to people and they are doing it to a lot of people. it is a real shame that this game is so buggy and so difficult to download. it crashes so much and it takes about 2 hours for it to download before you can even play it.

it is not worth spending the money on. i played for two days and then it broke. it is just not worth it. i couldnt play nfs1 or 2. my mouse just didnt work. i couldnt figure out why. i dont think i used the keyboard much, either. i did play the original nfs and used my keyboard. i know its a windows issue. i have a new dell deskto with a wireless mouse and keyboard. it worked fine on win7. i just switched to winxp so i could play nfs1 and 2. i also tried uninstalling the mouse driver and rebooting, but that didnt work. help???

## Download Directx 10.1 Need For Speed The Run For Windows

i found a solution to the problem of missing audio for some people, and the issue of a crackling noise. i can't guarantee this is a bug fix, but i'll attempt to explain why this worked. 1) i have a nvidia gpu, and i had no audio issues running nfs: the run on my laptop. i was running the game in 1080p with 120fps, and also had the audio turned on. this is a method that might work on your computer. 2) then i started to enable directx audio debugging. this will enable sound effects, as well as allowing you to see all of the audio-related settings, such as latency, volume, balance, etc. for the most part, this will help you get a better grasp on why you are having problems. this is a long shot, but try enabling the "directx audio debugging" in the "directx settings" tab, and then run the game. you should now have a better understanding of what is going on. good luck! if this works, please let us know. thank you. after i played this game, i've found that i got an error about the directx 10.1 api not being supported. so i've tried to search for an answer online, and i've found that i needed to install directx 10.1 on my pc. i've tried to install it before, but i've never done it, and i've never installed directx 10.1 on my pc before. the steps for the install are very simple, but it might take you a little bit of time to do. if you encounter any problems installing the directx 10.1, then you might need to

get it from this link: once you've installed the directx 10.1, then you need to reinstall the game. once it's reinstalled, then try to play it again. have fun. good luck! 5ec8ef588b
