

FlashFXP Full 5.0.0 Build...

This link is expired. Last working day was 07 January 2019.. How to run some code after x lines of code in vim? Is there any command in vim which can run some code after some number of lines of code? I have added a line which counts my line number as below, set line But I have to use only 2 lines of code to count the lines as well as the line number. I tried `:.search('^')` but this did not work. I just need to run `search()` after every 2 lines of code. Please help A: Found solution, p f988f36e3a
