I have used many photo editing programs, including Adobe Photoshop. Photoshop is different than other programs in many ways. For example, you can create a document and add names, contact information and other details to it and have it linked with a website, or you can just send a copy of the document to someone else. Photoshop does it all. The new brushes make Photoshop CS5 far easier to use than its predecessor. In previous versions of Photoshop, the tools for making brushstrokes were a bit awkward. A painter barely needed brushes to make a picture, while a photographer or graphics artist in graphic design needed a large variety of brushes to get the job done. One of the criticisms of the previous version was that it didn't have a "portrait" brush set. Photoshop CS5 takes that criticism and delivers the web designer's artist dreams: excellent brushes for every purpose. More than just a paint program, Photoshop can be used effectively for other types of work: text, 3D or animation as well as still-photography. But for still images, Photoshop is still the world leader in the area, and it is only getting better as each new version of the software is released. As always, faster and better is the name of the game with Photoshop. Even as a user who makes some of his living directly from Photoshop, I must say I have been surprised by what I have done in the past months. In the Macintosh versions of Photoshop, the workflow was very clumsy. It is still a great program with a lot of innovative features that will really help in the long run. I never thought that I would enjoy using Photoshop so much that I would stick with it for so long. And of course, I never thought that I would get so much out of it.
