[Gary Unger] Beeswax Scraper from Anaconda Robotics is a device that uses a beeswax comb to remove wax from a car waxed surface. It can be used for many things like removing tarnish from wood, removing the water from a film project or removing adhesive residue from paint. The device is based on the use of honeybees to clean glass, which is what the actual comb is made of. The comb consists of the queen bee, the worker bees and the drone bees. The queen bee is larger than the others and has larger body structure. It is the one that has the task of laying more than half of the brood and the reproductive cells and developing the young worker bees. The worker bees are smaller and are mostly responsible for cleaning the hive, maintaining the cells, protecting the queen and foraging for food for the whole colony. The drone bees are smaller than the worker bees and don't have a sting and have no role other than to mate with the queen. All this hard work and protection is done by the workers,
