The top part of the Photoshop window is where you perform your basic editing tasks. You can add, subtract, or change values using the graduated and colour-popup bars. On the left side of the workspace, most of the tool icons link to an Organizer panel, where you can organize your Layers and save them to the Photoshop Albums library. Along the bottom edge of the canvas are various panels, like a History, Materials, and adjustment panel. There is also a panel for working with text. The Layers, Adjustments, and Channels panels all work in the same manner. Layers are like folders for images. You can create a few, put them into groups, and assign actions to Layers. The Adjustments subsystem includes the Channels tab, and Layer Masks. Thanks for your review of Photoshop. For some images, Photoshop CS6 is still faster, particularly images that don't have any layers, and you can get a 7 or 8x speed increase. This did not happen with LR6, and the only reason I removed all the fancy add-ons is because I tend not to use them and they actually make me more productive. Point & Shoot used to be much faster in Photoshop CS6, but PS even beat it now. PS 7 has some of the same problems as LR, but appears to run faster than the earlier versions. You're only limited by how well the app caches the images being processed, and by how fast the machine is in rendering out the image. If the images being handled are not already optimized for that machine for speed, it can slow to a crawl. Simply render a saved feature such as a calibration image after opening the image into a good cache, and it will be much faster to start on.

And we're working on bringing the Substance Designer standalone version to the Mac, too. And more. The tool is like a paintbrush, and it works like this: First, click the Radial Gradient Tool icon and then left-click on a drawing surface. A small circle will appear on the canvas, and users can then apply colors in the gradient tool to create a tiled gradient effect. The gradient tool can be used to create full-color, semitransparent imagery such as banners, logos, or any other objects.
