Lightroom 5 is a big jump from Lightroom 4. In the end, it looks and feels like a complete, sophisticated photo management system like the recently released Google Photos app. It's impressive how a photo management tool that was around since Lightroom 1 has improved so much. Immediately, you can see the details of how Adobe manages all the image elements in Photo (including basic data, like Linear and Grayscale modes; the number of pixels per inch; and file sizes). You can also see from the preview that you can adjust sharpening, exposure, shadows, highlights, contrast, and a variety of other effects. And in addition to those elements, we can now go deep inside the image and adjust more using Adjustment Layers. Lightroom's interface has also been completely revamped. While the eye is now used to the appearance of Lightroom 4's dark, simple page icons, the new (and old) user interface allows for an easier way to play around with the camera and image. This interface reminds one of photo editing software like Adobe's After Effects and Adobe's Premiere Pro. Now, without having to open up a second application or tab, Adobe has created a user-friendly interface that allows new and experienced photographers to easily access the image editing menu tools on the fly. Photoshop 5 is filled with little tweaks and new features that make the product feel more like the company's other programs. Some of the use cases for which Photoshop is known include tools such as masking, masking adjustment layers, liquefying, unifying, and even the way it handles text.

Adobe RGB and Adobe Gamma support has been added to Photoshop and Affinity Photo, as well as the ability to view the file in its original linear RGB, even if it is a web-optimized image. Plus, high dynamic range (HDR) images now can be accessed in the browser, as well as when viewing them offline in browser Favorites. To make editing experts-only features accessible to non-experts, a new Adjust Panel has replaced the Lens Correction panel and enables users with less expertise in these features to also get to access them. The Lens Correction Panel now includes a grid that can also be dragged and dropped into a specific area of an image, and the adjustment tools now have a wealth of features more akin to what is available in the version for the full Photoshop application. And to make it even easier to create high-quality images, users can also automate common Photoshop activities with On-The-Fly Document Actions. These actions, stored in a new Library, can now be applied, even after the project has been exported. This new feature enables non-photographers to quickly apply adjustment layers and mattes, and many other image improvements that require minimal time and effort.
