In January, Adobe updated its line of digital content creation software, making it easier for users to create and post high-quality images and videos to social media. In the CS5 update, Adobe added smart photo features that take advantage of machine learning and AI to let users edit objects in images and videos more quickly—and better. Photoshop CS5 ushers in the next generation of what a photo editor can do. Mainly, it makes it easier for the user to perform actions like blur entire images (or parts of them) and copy and paste sections of images to brand new spots. This isn't a brand new feature, to be sure, but it's now easier to do. One of the biggest changes is that you have more control over the final image in the Edit screen. So if, for example, you want to add a border to your photo, you can do it in the same place where you crop or add a background, rather than having to roll over all of those options. There are many new features in Adobe Photoshop that make it easier for you to create more engaging images. In the CS5 update, tools to help you combine images are easier to use, and you can import and export more image formats. You can also share your creations in new ways, thanks to the addition of a friend icon in the document window. Then there's the ability to use a layer mask as your brush tool. Just paint on transparent parts of an image, and you'll paint the area below the layer mask. Not a new idea, but part of Photoshop is that it gets better with time.
